

MAINTENANCE GUIDE / ROCKSTONE

Please read the following maintenance guide before using your new rockstone product to ensure a well-protected and beautiful surface.

ABOUT ROCKSTONE / The beautiful surface of the rockstone material brings rawness and edge to your outdoor space. The material is designed to be weather resistant and can withstand temperatures from +25 to -20 degrees while still keeping its original appearance intact. Rockstone is comprised of resin, stone powder and fine sand mixed to this durable weather-strong material. The pigmented ingredients are added to the mixture so the colour will be consistent throughout the surface. Rockstone is ideal to use as tabletops, benches, planters and has proven to be perfectly waterproof, stain proof and resistant to UV rays.

PROTECT YOUR PRODUCT / Rockstone is not resistant to direct heat so please make sure to use e.g. trivets or other protection, when you serve your dinner, place hot drinks, a candle or other warm objects on the surface. This is to avoid any damage caused by the very high temperatures. Protect your rockstone against sharp edges or heavy weight, so the material will last for many years. Do not stand on the rockstone surface to avoid any damage on the surface.

GENERAL MAINTENANCE / Rockstone is a durable and strong material which does not need any maintenance in general. To clean the surface, we do recommend using a damp cloth or chamois cloth and sometimes a bit of mild soap.

In the unfortunate circumstance that you scratch the surface, use fine sandpaper #320 to rub the scratch in the opposite direction (E.g. if the scratch is displayed on the top in vertical direction you should rub the sandpaper horizontally). Afterwards, soak a towel and use the moist towel to clean the surface in intervals of 2 minutes and repeat sanding until the scratch is no longer visible.

If any further questions, feel free to contact MUUBS.
