

MAINTENANCE GUIDE / SUEDE

Please read the following maintenance guide before using your new suede product to ensure a protected and beautiful surface.

MUUBS uses suede for several products which has a rough surface compared to the soft side of the leather and this can create a complete different look. The leather has a beautiful and soft surface which is a great and feminin contrast to the other materials that MUUBS uses.

Suede is much more soft and vulnerable than regular leather. It will get stains faster and easier than leather contemporary with it is more difficult to clean. That is why it is very important to know how suede has to be maintained.

MAINTENANCE /

- The suede is untreated. Protect the material against dirt, stains and water with a suitable spray for impregnation of the suede. Always remember to remove dirt and dust before the treatment.
- Suede ages by usage and that is why it with advantage can be treated with care product suitable for suede. Remember to brush the surface with a suede brush so it looks like new again.
- Stains? Use a special brush to loosen the fibers and remove all dirt from the surface and thus give better access for the deep-seated stains. Furthermore, use cleaning detergents suitable for suede and follow the instructions carefully.

If any further questions, feel free to contact MUUBS.
