

# MAINTENANCE GUIDE / INDUSTRIAL IRON

Please read the following maintenance guide before using your iron cabinet to ensure a well-protected and beautiful surface.

Iron is a strong material and is used for many of our products. It is often used in combination with other materials to add a raw industrial look. Iron can vary in color from light grey to almost black. The color can change from production to production and also change color in the light. The raw iron has a natural dark color and raw surface, that gives each cabinet a majestic statement to the home.

**BEFORE USING THE PRODUCT /** Before first time use we recommend that you open the cabinet and let the cabinet get some air. Industrial Iron can have a certain smell in the beginning due to the raw material.

## **DAILY MAINTENANCE /**

- Daily cleaning can be done by dusting the surface with a dry cloth.
- Does not tolerate water.
- Cabinet with glas: we recommend to polish the glass with a cloth. Avoid to spray cleaning products directly on the iron. Spray on the cloth for polish instead and avoid any extra fluids in corners and moldings.
- Wax occassionally using a universal furniture wax and a soft brush or cloth.
- Do not place hot or wet items directly onto the surface.

If any further questions, feel free to contact MUUBS.
